

Sustainability Tips

Small everyday actions that add up, for students, schools and families.

Energy

- Switch off lights, screens and chargers when you leave a room.
- Use daylight where you can and choose LED bulbs.
- Lower the heating by 1 °C. It can cut heating energy use by up to 10%.

Waste

- Carry a reusable bottle, cup and lunch box.
- Repair, swap or donate before you throw away.
- Sort your recycling correctly. A contaminated bin can end up in landfill.

Water

- Take shorter showers and turn the tap off while brushing your teeth.
- Collect rainwater for plants.
- Report leaking taps and pipes at school.

Food

- Plan meals and use leftovers to reduce food waste.
- Eat more seasonal, local and plant-based food.
- Compost fruit and vegetable scraps.

Transport

- Walk, cycle, scoot or take public transport where you can.
- Share rides for longer journeys.
- Choose video calls when travelling is not necessary.

Nature

- Plant native flowers for pollinators.
- Leave a wild corner in gardens and school grounds.
- Join or organise a local clean-up.
